

Five-path multi-observable evidence chain for Theorem 15.18 P2 ($\alpha = 2/3$)
 Indirect witnesses: paths 2-5 do not evaluate $\|G_{\mu\nu} - 8\pi GT_{\mu\nu}^{\pm}\|/\|G_{\mu\nu}\|$ directly

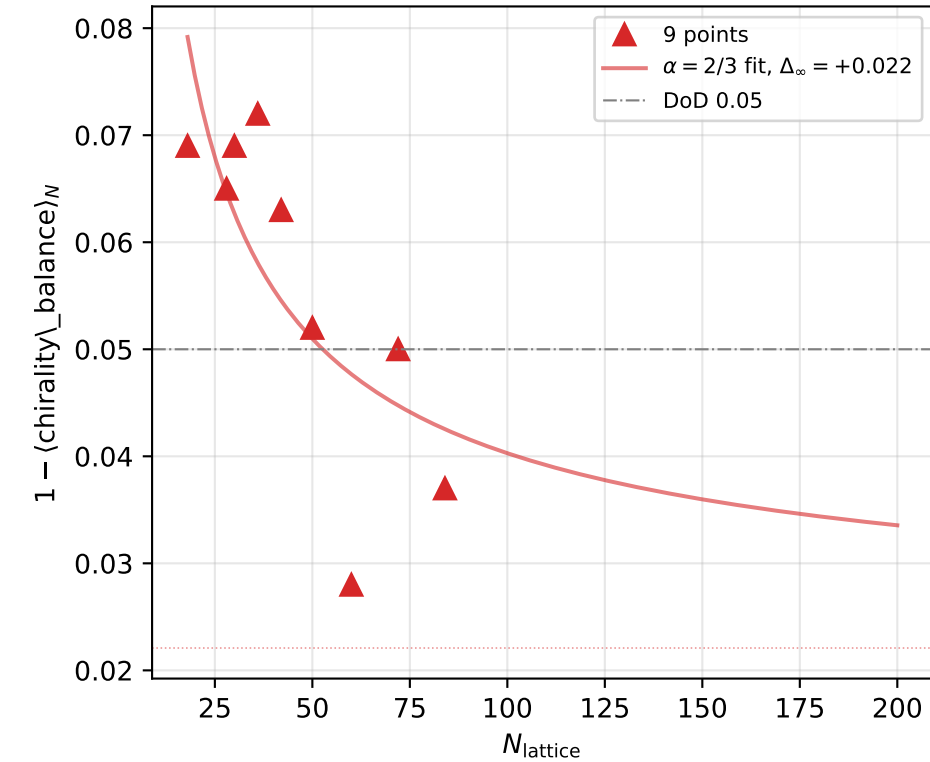

(1) Two-point Richardson on Δ_E
 (direct, only 2 anchor regimes)

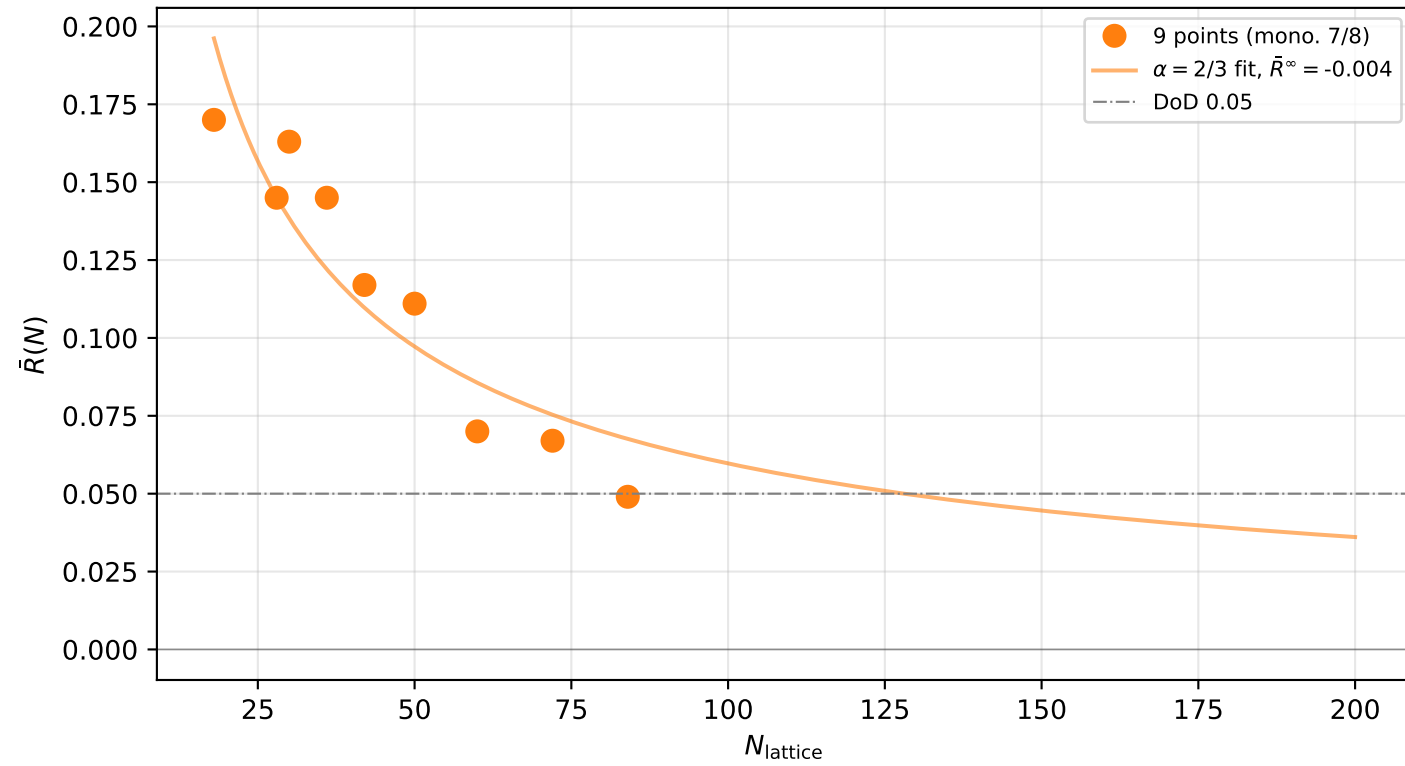

(2) 9-point structural bound
 ($R^2 < 0.15$: bound verif., not limit proof)

(3) 9-point chirality-balance
 (topological index witness, $R^2 = 0.55$)

(4) 9-point $\bar{R}$ curvature-side
 (load-bearing, $R^2 = 0.83$)

(5) 8-point $T_{00} + \Lambda$ source-side
 max |res| < 0.019 for $N \geq 30$
